

525 REVERSIBLE ATTENUATORS

Four active bipolar attenuators for audio signals and control voltages

„0“-position = no output signal present

“+10” position = output signal equals input signal (unity gain)

“-10” Position = output signal equals input signal (unity gain), but inverted

Input jacks (1-4 chained)

Input 1 is internally connected to +10 volt if nothing is patched. So the module doubles as single to quad variable voltage source.

Outputs 1-4
