

569 ESB/EGB

SET INPUT EXPANDER/GATE OUTPUT EXPANDER BASIC

The **M 569 ESB** and **M 569 EGB BASIC EXPANDER** modules are companions to the M 569 sequencer module.

The **M 569 ESB** expands the M569 by four switchable set inputs, one position per row can be specified.

The four push-button switches on the 569 ESB provide a way to manually access a stage instantly without stepping through all stages. This should be handy for setting up sequences, changing/fixing a particular note and for playing the sequencer on the fly.

All four inputs are daisy-chained: 1 → 2 → 3 → 4 = one signal can set all rows (the 569 sequencer in 4-channel mode) at once

The **M 569 EGB** expands the M 569 by four switchable gate outputs, one position per row can be specified.

The four push-button switches on the 569 EGB are extra manual gate buttons for the four rows of the sequencer.
